HITL AI-Driven Development — Team Collaboration

Humans discuss and decide. @claude-bot writes conclusions to GitHub. Personal Claude instances talk to GitHub only.

TEAM (HUMANS)

PM — **Product Manager**
Defines what and why

AR — **Architect**
Designs, reviews, gates PRs

D1 — **Developer 1**
Vertical slice owner

D2 — **Developer 2**
Vertical slice owner

QA — **QA**
Tests + incident regressions (non-blocking)

OP — **Ops**
Canary criteria + monitoring (non-blocking)

PERSONAL AI (GITHUB ONLY)

AI — **Dev 1 — Claude Code**
Reads docs + code from GitHub.
Writes code + tests to GitHub.
Never posts to Slack.

AI — **Dev 2 — Claude Code**
Reads docs + code from GitHub.
Writes code + tests to GitHub.
Never posts to Slack.

SLACK — WHERE HUMANS DISCUSS

#design-room

PM · AR · D1 · D2 · QA · OP | AI

PM · Architect · Dev 1 · Dev 2 · QA · Ops | @claude-bot

Humans talk to humans. @claude-bot is tagged one at a time when AI input is needed.

@claude-bot writes concluded decisions

GITHUB — SOURCE OF TRUTH

Documentation
HLDs, LLDs, ADRs, System Manifest, Training Plans

Source Code + Tests
Generated from docs. Convention-checked. 301 tests.

IaC
Terraform, Kustomize, ESO secrets, CronJobs

Pull Requests = Decision Gates
Design PR merges before code. Every decision is a merged PR.

Test Registry + Incident Registry
Institutional memory. Grows with every change + incident. Feeds impact analysis + canary criteria.

PRODUCTION — GCP

Management Server
Traefik, Grafana, Prometheus, Loki, Tempo, OTEL, OpenCost, Lifecycle Controller

GKE Cluster
App + GPU node pools. Scale-to-zero. Deployed via IaC.

GCS Storage
Assets, state snapshots, model artifacts

Observability
Langfuse traces + Grafana dashboards. ROI metrics measured here.

Canary Deployment
Risk-rated rollout via mgmt server. AI monitors go/no-go criteria.

Slack is for humans
People discuss with people. @claude-bot only speaks when tagged. No unsolicited AI chatter.

Personal Claude talks to GitHub only
Each dev's Claude Code reads/writes code via GitHub. Never posts to Slack. The code in GitHub is what matters.

@claude-bot is the scribe
Its job: translate concluded decisions into GitHub artifacts — issues, docs, PRs. Humans decide, bot writes it down.

Quality over speed
The goal is fewer problems, not faster deployment. Every step prevents a specific failure mode.
